

Integrated POS Solutions Reduce Payment Friction

With an integrated POS solution, your business can reduce payment friction for any payment transaction—reducing the risk and need for paper invoices, accepting payments outside of the office, and keeping in-office lines moving faster.

Accept customer payments whether you're in the field, at the office, or out at an event. Integrated POS solutions can help you reduce payment friction, connect payments to your back-office platforms, and get revenue insights in real-time. With CORE's POS solution, you can keep up with customer demands for a faster, more convenient payment experience.

86%

of consumers say that instant payments are beneficial (helping them budget better, complete payments faster, and avoid late fees).

57%

of consumers say they are more likely to do business with retailers that offer a contactless payment option.

CORE's integrated POS solutions offer:

Secure Payment Processing

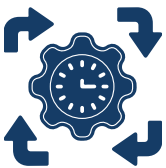

CORE's point-of-sale devices are backed by the highest level of security, including PCI-validated point-to-point encryption (P2PE) for point-of-sale (POS) payments, including industry-leading encryption and tokenization of online PHI, PII and payment data, and chargeback / fraud management.

- Card Present (US)/Card Not Present
- POS, Mobile, MOTO, Ecommerce and Salesforce Payments
- Credit/Debit/ACH/Apple Pay/ Google Pay/Samsung Pay
- PCI, NACHA and HIPAA Compliant
- Connections to Elavon, TSYS, Chase Paymentech, and First Data

Leading Payment Security

Our solutions encrypt payment data immediately upon swipe, dip or tap in the P2PE certified device, with encryption being done outside of the merchant environment by Bluefin. P2PE ensures that no clear-text cardholder data is available in the event of a data breach.

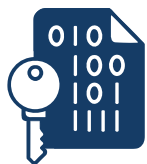

Flexible

Merchants that implement CORE's PCI P2PE solution in their POS environment are eligible for PCI's 33-question self-assessment questionnaire (SAQ) – a significant reduction from the 329-question SAQ D.

Device Security

PCI P2PE certified devices are more secure and are designed to detect tampering. If malicious activity is detected, the device is automatically deactivated, preventing a breach at the payment terminal.

Strict Controls

All PCI P2PE solution providers must abide by strict controls for the encryption and decryption processes. Device key injection is done through certified Key Injection Facilities (KIFs) and decryption only occurs in the hardware environment (HSM).

Cost Savings

The reduced scope of the PCI assessment to 33 questions enables significant cost savings across the security environments, with reductions seen in firewalls, penetration testing, system administration and more.

A Convenient, Modern Payment Experience

CORE offers a wide variety of secure point-of-sale systems and devices so that you can match the right solution to your customers' needs. Whether you're setting up a new processing system or running an event, POS devices enable you to take payments at any location—unattended, in-person, outdoor, or via a mobile device. This makes your products and services more accessible to current and prospective customers. CORE POS solutions accept a broad scope of payment methods:

CORE POS systems offer point-to-point encryption (P2PE) and meet all industry security standards and requirements.

A Better Way to Get Actionable Insights

When you adopt a POS solution that ties front-end payments to back-office accounting it's easy to get actionable insights into your sales. Our revenue platform consolidates all of your payment transaction activity—from various departments or collection sites across the enterprise—into a single database. We differentiate our POS solutions by giving you the ability to view, research, report, and audit all revenue collected by users and departments in a single repository.

The CORE POS Experience

Reduce Payment Friction

Payment methods continue to evolve and customers expect modern payment systems that accommodate those methods. A CORE integrated POS system gives you the flexibility to securely accept payments however, whenever, and wherever makes sense for your customers and for your business. And this helps your business grow.

The CORE Automated Reconciliation Experience

Save Time and Resources

Back office teams that utilize automated reconciliation don't spend 30% of their time in manual reconciliation. Gone are the days of staying late to complete the month-end close. Instead, automated reconciliation allows resources to be used for more strategic activities in the business.

Eliminate Accounting Errors

Automated reconciliation offers an accounting precision that isn't possible with human errors, paperwork, and disconnected systems. It's an error-free process that's fast and accurate.

Reduce Opportunities for Fraud

Irregularities that would traditionally be buried until manual reconciliation efforts caught up dissipate with automatic reconciliation. Detections happen early and investigations start without delay, reducing the damage to the business.

TRANSFORM YOUR PAYMENT EXPERIENCE
