

# Enterprise Over-the-Counter Payments

## FUNCTIONALITY

### End of Day Process

- Reconciliation for individual cashier, department and treasury level
- Configurable maximum cash drawer limits
- Notifications and supports balancing / cash pulls
- Consolidated multi-user bank deposits and multi-department bank deposit consolidation

### Cash Controls

- Individual user control totals maintained and available on-demand
- Cash float (change fund) tracking available ensuring cash control
- Single-click access to totals by bank account and tender, cash currency lists and check lists
- Secured cash balancing or 'blind balancing' utilized to provide advanced cash controls
- System validation against expected cash notification for cashier and supervisors for unbalanced deposits
- Point-of-sale and consolidated reporting

### Point of Service

- On-account & non-billed payment processing
- Automated, integrated receipting
- Configurable business rules engine
- Integrated PCI compliant processing
- Configurable transaction types
- Beginning / end of day cash workflow
- Integrated user-based activity
- Departmental deposits & cash bag control
- Centralized grouping of daily file submissions
- Integrated baseline reporting & host systems

## Receipts

- Data elements as determined by customer
- Receipts can be issued in duplicate
- Receipts may be generated through the default or specialty printer
- Receipts may also be delivered electronically / on-demand via email
- Duplicate receipts can be generated with a single click from the over-the-counter payments, search and admin modules

## Web-Service API

- Standard API exchange
- Development and maintenance of the system integration
- Supplementing or replacing internal IT efforts, if needed (at additional cost)

## Managed Services Gateway

- Real-time, integrated PCI certification process for validating credit card authorizations
- Credit card data stored in PCI-DSS certified environment, eliminating need for local data storage
- Unique tokens created and stored in database for credit card voids and refunds
- No cardholder data stored on servers

## Admin Center Console

- Central repository for configuration tools
- Access / manage files and execute file imports
- Report Generator
- Robust search functionality

## ACH / ICL

- Automatically settle card transactions
- Initiate ACH delivery (contingent on bank capabilities)
- Integrated printer + check scanning
- Files verification and transmission based on customer business requirements

## Transfer API

- URL-based and web-services based API
- Commonly used for portal integration
- Common uses are shopping cart, check out and authenticated user transfer

## File Exchange API (Batch)

- File mapping utility supporting import of AR and other data
- Unique keys can be identified, and weights assigned joining data from multiple imports

## MODULES

### Over-the-Counter Payment Solution

- Processing of on-account and non-billed payment activity
- Automated, integrated receipting
- Configurable business rules engine
- Integrated PCI compliant credit card processing
- Configurable transaction types
- Beginning and end of day working cash controls and workflow
- Integrated user-based activity dashboard
- Departmental deposits
- Cash bag controls
- Centralized grouping of daily file submissions showing file status
- Integrated baseline reporting
- Integration with host and financial system
- Electronic research functionality that allows users to view imaged documents, reprint receipts

### Configuration

- Controls most aspects of the user interface and experience within over-the-counter payments including departments, menus, transaction, and tender workflows
- Controls user access and security by role-based Security Profiles

### Admin Center

- Robust receipt searching
- Reporting
- Bank deposit reconciliation (see below)
